

MASTERBUILT

ULTRA-65

The MasterBuilt ULTRA65 series is designed for true Large Format (IMAX / Arri Alexa65 / 5-Perf 65MM film). The entire ULTRA65 series maintains the MasterBuilt character and look. Designed from the ground up and originated for the Alexa65 Camera sensor, the ULTRA65 series offers a refined image that draws the eye with enhanced three-dimensionality and perspective. The ULTRA65 series lenses evoke the feeling of an image from the past, with a soft contrast leading to gentle transitions between sharp and soft elements. In addition to the advantage of generous image circle and coverage, the ULTRA65 series lenses act as excellent companions to the Classic and Soft Flare series, adding the intricate focal lengths cinematographers seek out.

The MasterBuilt Lenses are designed and inspired directly by the cinematographers' vision. Extensive testing and in-depth conversations have produced each singular lens series. MasterBuilt employs exceptional optics and looks to the past for stylistic images and analog elements. The MasterBuilt Lenses are manufactured with exceptional craftsmanship and the highest quality materials for absolute resilience. The "LOOK" is formulated to create brilliant three-dimensional separation and smooth background reproduction (bokeh), while utilizing the mechanics and function of modern technology to produce a lens of complete precision. The MasterBuilt Lenses strike a perfect balance of vintage aesthetic and high-quality optics.
